

## DVD-04

This DVD started out with the contents of CD-16, adding to it as new files and versions became available. But it does not include duplicates of files on DVD-03 for which there are no updates.

For each program the intent is to provide hotlinks to the source web site, copies of web pages with info about the program, as well as the program (with its version number and date of download in the form .MMDDYY).

Most programs are freeware. A few are trialware (limited duration of free use), though I have removed most of these.

In addition to programs there are many information files (tips) and references to web sites that provide sources of freeware.

Note that some password programs may trigger alerts by antivirus programs.

Advantages of using these discs as a source of programs:

Programs have been recommended by reliable sources;

They have been downloaded from reliable sources;

Saves download time;

Easy access to the download sites (sometimes the access to the freeware version is not easy to find);
